

ABSTRACT

A speaker apparatus having a first half and a second half, each having a rim and being generally paraboloid shaped, or bowl-shaped. A first opening, or window, is positioned near a vertex of the first half. A second opening is positioned near a vertex of the second half, and a grille positioned within the second opening. A mid-range component may be positioned within the first opening. When the apparatus is assembled, the respective rims of the first and second halves engage to form a generally hollow chamber therebetween.
